Aim of Web Portal:

This web Portal is designed to download consolidated schedule report of Renewable Energy (non-conventional) generators having Installed capacity equal or less than 25MW and source type other than Wind & Solar and having contract/EPA with MSEDCL for purchase of power.

Definitions:

Vendor:

Vendor (Generator) is an Entity which generates Power and sale it to MSEDCL. The Vendor must have a Short term/Long term Power purchase agreement with MSEDCL.

Developer:

Developer is an Entity appointed by a group of generators (Vendors) who provides percentage share of Power generated by each generator to MSEDCL On behalf of the Generators.

Each entity is provided with a unique user id by MSEDCL to login into the system. If you have not received your unique user id then contact [email id].

The URL for Non-Conventional Vendor Portal is: https://nvp.mahadiscom.in/NCE_Vendor/

EPA:

EPA (Energy Purchase Agreement) is an agreement between MSEDCL and Vendor for purchase of energy from vendor.

EPA ID:

This is an MSEDCL System generated agreement id for the EPA between MSEDCL and Vendor.

EPA Type:

There are different types of EPA defined in MSEDCL.

- 1. EP This type represents Sale to MSEDCL Long term EPA
- 2. EPS This type represents Sale to MSEDCL Short term EPA
- 3. SU This type represents Self Use Open Access agreement using MSEDCL grid lines
- 4. SUO This type represents Self Use and Sale to other utilities agreement using MSEDCL grid lines
- 5. TP This type represents Sale to Third party agreement using MSEDCL grid lines

The vendors having at least one agreement type as EP or EPS are eligible to access NCE Vendor Portal.

Metering Point:

It is a nodal point for Vendors and MSEDCL. A generator or group of generators injects electricity into the MSEDCL grid through this point. It has special energy meters attached to it to record the units injected into the MSEDCL grid.

Dayahead schedule:

It is the expected generation capability of the generating unit/s or station in MW declared by such generating unit or station in relation to any time block of the next day or whole of the day expressed in 15 minute interval (Time block), duly taking into account the availability of fuel or water .

Dayahead schedule Revision:

It is the expected revised generation capability of the generating unit/s or station in MW for each 15 minute time block for next day starting from 00:00 Hrs to 24 Hrs & uploaded after 9:00 Hrs but not later than 23:59 Hrs of previous day.

Intra day schedule Revision:

It is the expected revise generation capability of the generating unit/s or station in MW declared by such generating unit or station in relation to any time block of same day till end of day, duly taking into account the availability of fuel or water .

Please note that any revision in schedule during Intra day i.e same day will be effected from 4th time block, counting the first time block as Time block in which revision is to be uploaded.

For example , Generator "X" want to revise its expected schedule generation from existing say 9MW to 8MW at 10:50 Hrs. In this case, Generator "X" will able to revise schedule from 11:30 Hrs. i.e. 4^{th} Time block.

The counting of 1^{st} to 4^{th} Time block in this case as under

1st Time block: 10:45 to 11:00 Hrs.

2nd Time Block: 11:00 to 11:15 Hrs.

3rd Time block: 11:15 to 11:30 Hrs.

4th Time block: 11:30 to 11:45 Hrs.

Since 10:50 Hrs. (i.e. when schedule revision is to be submitted) is in

10:45 to 11:00 Hrs. time block, the said time block is counted as 1^{st} time block

and hence any schedule revision will be effected from 11:30 onward till last time block of the day i.e 23:45 to 24:00 Hrs.

Generator code:

It is an identification code assigned to each generator machine of the vendor. The structure of generator code is as follows

E.g., C520 + 300000721 + 001

Circle code + Vendor id + machine no.

Source:

The sources are classified as below

- 1. WIND Wind Energy
- 2. SOLA Solar Energy
- 3. SMHY Small Hydro Energy
- 4. BAGA Bagasse Energy
- 5. BIMA Biomass Energy
- 6. MSW Municipal Solid Waste

Application ID:

It is a system generated ID which is created when a user saves an invoice (Vendor) or percentage breakup (Developer).

% Breakup bef EPA expires:

This field indicates the percentage breakup of a generator before the EPA between MSEDCL and the vendor expires mid-month.

% Breakup aft EPA expires:

This field indicates the percentage breakup of a generator after the EPA between MSEDCL and the vendor expires mid-month.

Procedure to Use Portal to download schedule & various Reports

Login to nvp portal with https://nvp.mahadiscom.in/NCE_Vendor/

Please select Generation Reports Icon.

A. Generation Schedule Reports:

Now select option source type as Bagasse, Biomass, and Small Hydro, Then schedule type as either Dayahead or Intra Day.

Once Dayahead is selected, schedule for next day will be downloaded and with Intraday, the schedule for same day will be downloaded.

However if user want to download Dayahead or Intraday schedule of any particular day, then User shall select Custom date & using calendar menu shall select desire date.

There are two types of exception reports

- 1. Exception occurrence: Report to download the list of generators failed to upload schedule for continuous seven days
- 2. Exception never Upload: Report to download the list of generators who have not uploaded schedule till date

B. Exception occurrence Report:

Select "Exception occurrence" TAB and select schedule type as either Dayahead & Intra Day.
